

## RAPID PIPELINE ICON - COLOR VARIATIONS

---

The product logo icon is available in a defined set of approved color variations. These variations follow the same design schema applied to the logo to maintain consistency and reinforce brand identity across all applications.

As with the logo, the preferred color variant is white-green, which should be used over white background. For other allowed backgrounds, the appropriate variant should be chosen, always prioritizing variants including the iconic green color.

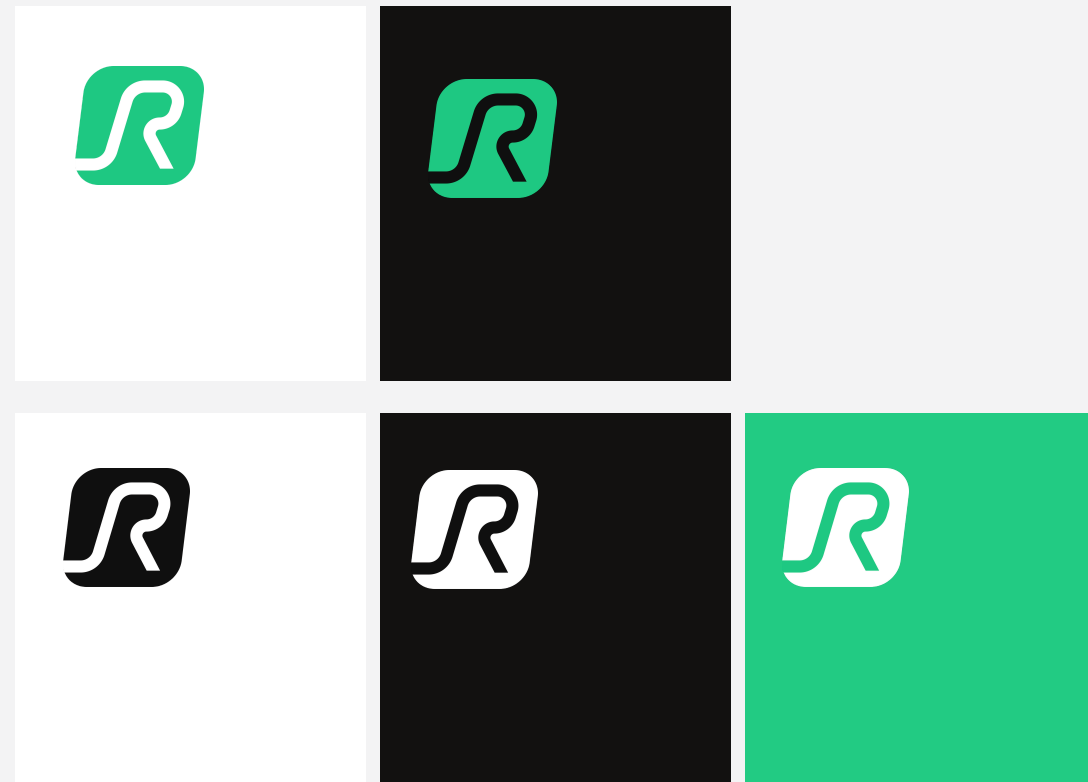

## RAPID PIPELINE ICON - USAGE: FRAMED & UNFRAMED

The logo icon can be used in two variations: with its rounded, skewed frame or without it. The choice depends on the context and surrounding design elements.

- **Unframed Icon:** Use the icon without its frame in environments that already impose a container (e.g. social media avatars or app icons) to avoid a "frame within a frame" effect and ensure visual clarity.
- **Framed Icon:** Use the icon with its distinctive rounded, skewed frame in all other contexts where no external frame is placed around the icon. The frame reinforces brand identity and provides structure when no external boundary is present.
